

The Canberra Elliptical Birth Bath

This birth pool is designed to be quick and easy to install, easy to clean with its one-piece construction and roomy for a pregnant mum-to-be to move about freely throughout labour. It is constructed in such a way as to give it the flexibility to be tailored and adapted to your needs. The Canberra fits 'end-on' to the IPS/wall.

Specifications

- In-built inner step/seat.
- Hatchways for easier installation and maintenance.
- Made in Britain in accordance with BS EN 14516 and HTM64.
- Central waste and choice of sides for service hatch.
- Installation service available as well as fitting instructions and support.

Plumbing Specifications

- All Aquabirths baths have been designed from the plumbing upward. The birth pool is designed to incorporate a 'waterless straight through' trap to BS5572 for avoidance of standing water. Birth pools should be installed with a waterless trap for a better level of hygiene and odour control: leaving the valve closed is not enough
- Uses standard plumbing parts for better seal and cheaper maintenance. (standard bath waste supplied but not attached).
- Supplied with robust quarter-turn ball-valve waste (but not fitted)
- Consultation, advice and support available, we offer an installation service and there are written fitting instructions.

Our vision is for a birthing pool in every birthing room and so we design pools that are good quality and good looking.
